Taguchi has envisaged a new method of conducting the design of experiments which are based on well defined guidelines. This method uses a special set of arrays called orthogonal arrays. These standard arrays stipulates the way of conducting the minimal number of experiments which could give the full information of all the factors that affect the performance parameter.

~~What is the logic of Taguchi methods~~

The Taguchi method is aimed at the manufacturing situations. The Taguchi Method has been extensively elaborated and analyzed in published research works. Box and Meyer suggested a method to estimate the variance of the response and identified factors that affect it with small non-replicated designs.
