The Aerodrome Manual denotes the management structure that the Airport has in place to ensure a systematic approach to aerodrome operations. Its principal objective is to show how Airport management shall fulfil their safety accountabilities and responsibilities. It contains relevant policies, standards and procedures by which this shall be achieved.

### Aerodrome Manual | London Stansted Airport

The Gatwick Airport aerodrome manual contains details of the characteristics, policies and procedures for the safe operation of the airport. It complies with all applicable requirements and with the terms of the EASA Aerodrome Certificate. ### **Aerodrome Service Manual Icao**

The Aerodrome Manual contains details of the characteristics, policies and procedures for the safe  
operation of Gatwick Airport and complies with all applicable requirements and with the terms of the  
EASA Aerodrome Certificate.

This independent manual provides airport planners and architects with an essential planning guide and  
reference tool, based on the author's extensive experience in the field and involvement in developing  
best practice airline and airport industry guidelines. Chapters cover topics such as demand  
forecasting, masterplan development, terminal pier and satellite infrastructure, baggage handling,  
apron design and airport security. Provides airport planners and architects with an essential guide and  
reference tool, based on the author's extensive experience Discusses key airport planning issues  
including forecasting demand, planning and strategic objectives and airport security Outlines important  
airport planning principles specified by IATA for masterplan development featuring evaluation  
techniques and independent development planning

"The term 'air traffic services' ... {is} a generic term meaning variously flight information service, alerting service, air traffic advisory service, air traffic control service, area control service, approach control service or aerodrome control service" -- p.I-1-1-1.

The objective of this book is to provide ICAO, States, competent authorities and aerodrome operators with a comprehensive overview of legal challenges related to international aerodrome planning. Answers to derived legal questions as well as recommendations thereafter shall help to enhance regulatory systems and to establish a safer aerodrome environment worldwide. Compliant aerodrome planning has an immense impact on the safety of passengers, personnel, aircraft – and of course the airport. Achieving a high safety standard is crucial, as many incidents and accidents in aviation happen at or in the vicinity of airports. Currently, more than 40% of the ICAO Member States do not fully comply with international legal requirements for aerodrome planning. Representatives of ICAO and States, as well as aerodrome and authority personnel, will understand why compliance with the different legal facets of aerodrome planning is challenging and learn how shortcomings can be solved.

The implementation of Safety Management Systems at international airports was one of the most considerable changes in the regulatory framework for the operation and licensing of aerodromes in recent years. However, even more than five years after its inception it appears that the high expectations ICAO has placed on what has been designed as paradigm shift in the way of doing business in the airport industry were not materializing and Safety Management Systems appear at best to only marginally impact the safety performance of airports. Based on the lessons learned from the implementation of SMS in Germany an ideal organizational set-up for a most effective aerodrome SMS shall be designed. This proposal of an ideal organizational set-up shall be validated through a model implementation at a representative airport and subsequent long term observation in live operation. This model implementation serves as a basis from which recommendations for a future European regulation of Aerodrome Safety Management Systems under the EASA system shall be derived.

The new edition of an essential reference book for everyone who works in aviation.
