Syllabi for courses offered in EEB since Fall 2013 are listed below. Current Biology syllabi are available on biology.utk.edu.

Course Syllabi | Ecology & Evolutionary Biology

Biology 141 and 142: Foundations of Biology. In fall 2017, Jaap teamed up with Megan Cole to develop a new curriculum for Emory's introductory biology courses. In this class, we provide a broad overview of biological science, from the molecular molecules that first gave rise to life, to

the global organization of life into ecosystems.

TEACHING – De Roode Lab

A laboratory course that complements the lecture course Biology and Microbiology 389/589 in biotechnology. Students will gain hands-on experience in some of the principles of cell culture, product isolation and purification, and molecular genetic manipulation of genes that are basic to many areas of this broad and rapidly changing field.

| Ecology and Evolutionary
Biology

This class meets with and covers the same topics as BIOL 333 (Community Ecology), but is designed for biology majors who need a plant ecology-focused course. Students will explore the theories and experimental evidence of community ecology and conduct ecology projects with a specific focus on plant processes. Fall, odd years.

Applied Biology Undergraduate Major (BS) - Applied Biology ...

The biology major offers five flexible routes to a degree. You can earn a general degree, or you can add a concentration in cell and molecular biology, ecology and evolutionary biology, education or medical technology. Additionally, you can earn a graduate biology degree through the combined 4+1 program or the traditional two-year program.

the discovery of the "splicing" of the gene transcripts, the list would include the whole molecular genetics of the lambda bacteriophage, the notions of "promotor," "repressor," and "integration," the discovery of the reverse flow of genetic information, the very existence of oncogenes, the S'-terminal "cap" structure of eukaryotic mRNAs, ... Electronmicroscopy, ultracentrifugation and tissue culture were the landmarks on the way of the young science. During the past few years, however, a major (and not so silent) revolution took place:

Read Book Biology 260 Ecology Lab Fall 2002 Jen

recombinant DNA technology with all its might entered in our laboratories, and restriction mapping of cloned genomes and sequencing gels have replaced plaque counting and sucrose gradients. The new techniques have made it possible to "dissect" the entire genome of a virus at the molecular level, and studies that would have been dreamt of just in the mid-seventies became the everyday experiments of our days. With new insight into the structure of viral genomes, and a deeper understanding of the mechanisms that regulate their expression, our view

Read Book Biology 260 Ecology Lab Fall 2002 Jen

of viruses was bound to change: this volume bears witness to this impressive advance.

"This flexible laboratory manual contains nearly 60 exercises involving small-scale ecological systems that can be conducted within a weekly lab period right on campus, regardless of the weather or resources available. Each chapter describes an ecological concept, and provides a choice of exercises involving outdoor observation and measurement, hands-on modeling, small-

Read Book Biology 260 Ecology Lab Fall 2002 Jen

scale laboratory systems, biological collections, problem sets or computer-based analyses. In order to help build quantitative and critical thinking skills, record sheets, graphs, and calculation pages are provided as needed for in-class data analysis. Question sets are provided in each chapter, and computer step-by-step instructions walk through standard mathematical models and commonly used statistical methods. Suggestions for further investigation present each topic as an open-ended subject of inquiry." -- book cover.

mechanisms' by Stanley Falkow Covers safety aspects, detection, identification and speciation Includes techniques for the study of host interactions and reactions in animals and plants Describes biochemical and molecular genetic approaches Essential methods for gene expression and analysis Covers strategies and problems for disease control

In this Second Edition of the introductory text in the acclaimed Nutrition Society Textbook Series, Introduction to Human Nutrition has been revised

Read Book Biology 260 Ecology Lab Fall 2002 Jen

King updated to meet the needs of the contemporary student. Groundbreaking in their scope and approach, the titles in the series: Provide students with the required scientific basics of nutrition in the context of a systems and health approach Enable teachers and students to explore the core principles of nutrition, to apply these throughout their training, and to foster critical thinking at all times. Throughout, key areas of knowledge are identified Are fully peer reviewed, to ensure completeness and clarity of content, as well as to ensure that each book takes a global perspective

Read Book Biology 260 Ecology Lab Fall 2002 Jen

Introduction to Human Nutrition is an essential purchase for undergraduate and postgraduate students of nutrition/nutrition and dietetics degrees, and also for those students who major in other subjects that have a nutrition component, such as food science, medicine, pharmacy and nursing. Professionals in nutrition, dietetics, food science, medicine, health sciences and many related areas will also find much of great value within this book.

Concepts of Biology is designed for the single-

Read Book Biology 260 Ecology Lab Fall 2002 Jen

semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when

Read Book Biology 260 Ecology Lab Fall 2002 Jen

They understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that

Read Book Biology 260 Ecology Lab Fall 2002 Jen

Instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Human Parasitology emphasizes the medical aspects of the topic, while incorporating functional morphology, physiology, biochemistry, and immunology to enhance appreciation of the diverse implications of parasitism. Bridging the gap between classical clinical

Read Book Biology 260 Ecology Lab Fall 2002 Jen

parasitology texts and traditional encyclopaedic treatises, Human Parasitology appeals to students interested not only in the medical aspects of Parasitology but also to those who require a solid foundation in the biology of parasites. *Updated and expanded reference section *New chapter on Immunology *Additional SEM and TEM micrographs *Professionally drawn life cycle illustrations *Addition of "Host Immune Response section for each organism
