The Lean Toolbox for Service Systems is the first book that attempts to assemble a comprehensive set of tools for lean service and administration. Other publications have dealt with only a segment of the tools or a segment of the range of service systems. The book is a result of several years' work in Lean Service at the Lean Enterprise Research Centre, Cardiff Business School, and the service management programme at the University of Buckingham. All material in the book has been 'field tested' by exposure to service professionals and executive programmes. A feature of the book is that it integrates several approaches rather than advocating a particular approach. Attention is given to general Lean service concepts and frameworks, to mapping and understanding different types of service system, and to a range of tools that have been found to be useful in a variety of service environments.

'Lean' in this title refers to operations management, the Toyota Production System, and its derivatives. The book is a companion volume to The Lean Toolbox which focused on operational tools and techniques whereas this book is focused on the essential human aspects of Lean transformation. The book is a sourcebook for practitioners and managers covering a wide range of concepts, providing sufficient information to grasp the essentials of each topic and giving leads to further reading. The Chapters include Antecedents and myths, Established Lean people practices, Eight models of people at work, Systems aspects, Psychology aspects, Engagement, Problems, Decisions, Learning, Leadership, Teams, Organisations, Ergonomics. The work of more than 150 authorities from operations, psychology, systems, and change are drawn on to give a comprehensive overview. The authors' extensive knowledge and experience complement each section. As with The Lean Toolbox, the text is concise, written for busy managers who seek both a guide and a quick reference.
