Practice *Measurements and Problems With Conversions* Chemistry Quiz

Another type of common conversion problem deals with conversions between some unit and a prefix of that unit such as a conversion from meters to millimeters. The following table

Read Free Chemistry

provides a list of some widely used prefixes. For example, 1 gigameter (Gm) = 1,000,000,000 meters (m) or 10^9 m, and 1 microinch (μ m) = 0.000001 in or 10^{-6} in.

Perhaps you can determine the answer in your head. If there are 100 cm in every meter, then 3.55 m equals 355 cm. To solve the problem more formally with a conversion factor, we first write the quantity

Read Free Chemistry

we are given, 3.55 m.
Then we multiply this quantity by a conversion factor, which is the same as multiplying it by 1.

2.6: Problem Solving and Unit Conversions - Chemistry ...

The quantity in the problem is multiplied by one or more “conversion factors,”

in which the numerator is equal to the denominator.

Since the numerator and denominator of the conversion factor are equal, multiplying by the conversion factor is like multiplying by 1 and thus does not change the value of the original quantity.

Conversions within the metric system, you must memorize the conversion (for

example: $1000 \text{ mL} = 1 \text{ L}$, or $1000 \text{ g} = 1 \text{ kg}$ should be memorized)

Remember that metric conversions are exact ratios and thus will not limit your significant digits for the answer.

First start with what you are given.
