then by the same argument b_1, b_2, b_3 and b_4 are four distinct nonidentity solutions. We must further show that b_2, b_3 and b_4 are distinct from a_1, a_2, a_3, a_4 . If $b_2 = a_i$ for some i , then cubing both sides we have $b_2^3 = a_i^3 = b_2^6 = a_i^6$, which is a contradiction. A similar argument applies to b_3 and b_4 .
