The heroine of this book is a sensor who can sense supernatural creatures whilst being impervious to their magic. Hiding her gifts is second nature to her as she believes that she will be killed if discovered. The mysterious disappearance of her friend leads her to a host of supernatural creatures and into a whole lot of trouble. The characters are interesting and well handled and the plot line entertaining. A great addition to the paranormal fantasy genre. I will be looking for the next book in ...

Melena Sanders faced her fair share of danger with insurgents and terrorists when she served in the U.S. Army, but now she is about to go up against a new threat. Her best friend, Aniya, has disappeared while on a trip to Fairbanks, Alaska—a supernatural haven. Most humans have no idea darker races lurk amongst them. Mel knows better. If she wants to get her friend back, she's going to have to go in alone—but not unarmed. Melena has a few special skills the Army didn't provide, but the odds are still against her. She's got to come up with a plan fast that doesn't involve her, or her friend, dying. But danger likes to play it rough. A war for power is about to rise in Fairbanks and if she wants to get Aniya back, she's going to have to step right into the middle of it.

Ever since dragons invaded Earth, Bailey Monzac and other survivors have had to adjust to a new world order. But a long-lost threat is re-emerging that could once again destroy everything they've been struggling to rebuild—for both man and beast. There's an artifact out there that can control dragons, and many would seek to possess it for ill intent. It's going to be up to Bailey, her dragon shape-shifter ally Aidan, and their friends to embark on a long and arduous quest to recover the relic before it falls into the wrong hands. Along the way, relationships will strengthen and the bonds of friendship will be tested. For there can only be one outcome if they wish to survive the journey.

Final installment of the Dark Destiny Series! Demons and pregnancy don't mix. Cori and Bartol have six weeks left to go until their baby is born, but all hell is about to break loose before that happens. Demons are possessing humans again and wreaking havoc. No one knows what their agenda is, but it's increasing tensions between the humans and supernaturals, escalating into violence. As one of the only people capable of slaying the hell spawns, Bartol has been called upon to deal with them. But impending fatherhood is challenging enough, especially when he's still struggling to overcome psychological trauma in order to have the relationship with Cori that she and their child deserve. Unfortunately, an ultimatum from the angels forces Bartol into the fight, and leaves Cori battling her own doubts and fears. Their child is coming—will they be ready?

Book 4 of the Sensor Series. Between her service in the U.S. Army and her new life living with supernaturals in Alaska, Melena Sanders has had her loyalty and duty tested in every possible way. Or so she thought. Tensions among supernatural factions in Fairbanks are growing after the city's recent attacks and she must pick a side. Her nephilim lover, Lucas, needs her help to search for his missing brother—whose disappearance may not be all it seems. And agents from the Department of Homeland Security are lurking about investigating the suspicious "earthquake" that rocked the region four months ago. It's not the best time to be planning a trip out of town, but troubles in Fairbanks aren't her only problem. A greater supernatural plot is developing and only by attending an upcoming ball in New Orleans can she discover more. There's no way to avoid it. Her loyalty and duty to those she cares for are about to clash.

Seven years have passed since the publication of the previous edition of this book. During that time, sensor technologies have made a remarkable leap forward. The sensitivity of the sensors became higher, the dimensions became smaller, the selectivity became better, and the prices became lower. What have not changed are the fundamental principles of the sensor design. They are still governed by the laws of Nature. Arguably one of the greatest geniuses who ever lived, Leonardo Da Vinci, had his own peculiar way of praying. He was saying, "Oh Lord, thanks for Thou do not violate your own laws." It is comforting indeed that the laws of Nature do not change as time goes by; it is just our appreciation of them that is being renewed. Thus, this new edition examines the same good old laws of Nature that are employed in the designs of various sensors. This has not changed much since the previous edition. Yet, the sections that describe the practical designs are revised substantially. Recent ideas and developments have been added, and less important and nonessential designs were dropped. Probably the most dramatic recent progress in the sensor technologies relates to wide use of MEMS and MEOMS (micro-electro-mechanical systems and micro-electro-opto-mechanical systems). These are examined in this new edition with greater detail. This book is about devices commonly called sensors. The invention of a microprocessor has brought highly sophisticated instruments into our everyday lives.

This short story takes place between books 2.5 and 3 of the Sensor Series. It's New Year's Eve and Melena Sanders is hoping she can survive the night without any more trouble in her life. But then her adopted teenage daughter, Emily, confesses to a prank gone wrong. Now her young werewolf admirer is caught in a trap on a full moon. Melena's got to figure out fast how to rescue him without either of them getting bitten in the process. Of course, nothing ever goes quite how she plans... Word count: 12,000 (approximate)

#1 New York Times bestseller "Essential reading for anyone interested in understanding and treating traumatic stress and the scope of its impact on society." —Alexander McFarlane, Director of the Centre for Traumatic Stress Studies A pioneering researcher transforms our understanding of trauma and offers a bold new paradigm for healing in this New York Times bestseller Trauma is a fact of life. Veterans and their families deal with the painful aftermath of combat; one in five Americans has been molested; one in four grew up with alcoholics; one in three couples have engaged in physical violence. Dr. Bessel van der Kolk, one of the world's foremost experts on trauma, has spent over three decades working with survivors. In *The Body Keeps the Score*, he uses recent scientific advances to show how trauma literally reshapes both body and brain, compromising sufferers' capacities for pleasure, engagement, self-control, and trust. He explores innovative treatments—from neurofeedback and meditation to sports, drama, and yoga—that offer new paths to recovery by activating the brain's natural neuroplasticity. Based on Dr. van der Kolk's own research and that of other leading specialists, *The Body Keeps the Score* exposes the tremendous power of our relationships both to hurt and to heal—and offers new hope for reclaiming lives.
