On the other hand, differential diagnosis is a list of possible diagnoses (from the most likely to the less likely) deducted from the examination of the patient. In physical therapy terms, unlike in other health care professions, the diagnosis is used to understand how the condition affects the individual as it relates to function. This is because therapists work to improve the function of the whole person, as well as the function of the individual system effected by the condition.

Learn how to screen for red flags and when to refer clients to a medical specialist! Differential Diagnosis for Physical Therapists: Screening for Referral, 6th Edition provides a step-by-step approach to screening for systemic disease and medical conditions that can mimic neuromuscular and musculoskeletal problems. It describes both red flags and yellow flags, so you can recognize the signs and symptoms for conditions outside the scope of physical therapy practice. This edition includes new information on women's health issues. Written by experienced PT practitioner Catherine Cavallaro Goodman, this book helps you determine whether a client's symptoms require physical therapy or physician referral! UNIQUE! Five-step screening model is systems- and symptoms-based, and follows the standards for competency established by the American Physical Therapy Association, covering past medical history, risk factor assessment, clinical presentation, associated signs and symptoms, and review of symptoms. UNIQUE! Case studies are based on clinical experience and give real-world examples of how to integrate screening information into the diagnostic process and when to treat or refer. Evidence for the screening process is based on peer-reviewed literature, reporting on the sensitivity, specificity, and likelihood ratios of yellow (cautionary) and red (warning) flags. Key Points to Remember boxes at the end of each chapter provide quick, bulleted summaries of critical information. Quick-reference summaries include tables, boxes, follow-up questions, clinical signs and symptoms, and case examples. Screening tools and checklists are found in the book and on the Evolve website, and are downloadable and printable for use in the clinic. Quick response (QR) codes that can be scanned on a smartphone, tablet, or other mobile device provide links to valuable screening tools such as lists of questions for screening specific problems, checklists, intake forms, and assessment tests New content on women's health expands coverage of this important topic. UPDATES reflect the most current information on screening for referral. New associate editors — John Heick and Rolando Lazaro — bring fresh insight, as respected physical therapy educators. New! Color tabs make it easier to locate chapters and topics.

Differential Diagnosis for Physical Therapists

The first diagnosis book written by PTs for PTs that is based on how patients come into the clinic...by their presenting symptom, not by organ system! A pioneering team of practitioners and educators address the growing need for PTs to determine whether a patient's condition is appropriate for physical therapy...to identify the relevant underlying pathology...and to ensure that a serious condition has not been overlooked. Practical, well organized, and easy to use, it's a resource that you'll consult every day when evaluating and formulating treatment plans for both adults and children. Click below to watch two of the authors discuss the book:

Manual muscle testing is a cornerstone activity in physical and occupational therapy. Designed to complement, not supplement two existing tomes in the literature, this book presents information that is contained, but not readily accessible in the other two books. Each muscle or muscle group is presented on a two page spread. Each spread is chock full of information, containing a picture of the muscle test, step-by-step instructions for performing the test, the muscle's origin and insertion points, etc.

A must-have physical and manipulative therapy case book to facilitate confident diagnosis Cases in Differential Diagnosis for the Physical and Manipulative Therapies: a Case Based Approach is a high-quality Australian case book ideal for students studying physical and manipulative therapy. This physical and manipulative therapy textbook facilitates development of the skills students and therapists need to reach a final diagnosis or differential diagnosis with confidence. Cases in Differential Diagnosis for the Physical and Manipulative Therapies features more than 225 clinical presentations in differential diagnosis. All cases are presented in four life stages – infancy and childhood, adolescence, the adult years and the later or elderly years – and each life stage covers a broad range of differential clinical topics. With this physical and manipulative therapy text, students will gain valuable insight into scenarios commonly encountered in clinical practice, while developing and refining their diagnostic skills. Cases include unsteadiness and vertigo in the elderly, fever in infancy and childhood, reproductive disturbances in women, and eating disorders, substance abuse and behavioural disturbances in adolescence. Over 35 experts from diverse fields have contributed to Cases in Differential Diagnosis for the Physical and Manipulative Therapies, which also boasts comprehensive appendices featuring abbreviations, orthopaedic tests and extra questions. As physical and manipulative therapists often find themselves in the role of the primary contact practitioner, it is imperative they are trained to identify underlying medical problems that may require referral to a medical practitioner. With this invaluable diagnostic resource they can do just that.
