When digital content and technologies are designed in a way that is inaccessible for persons with disabilities, they are locked out of commerce, education, employment, and access to government information. In developing areas of the world, as new technical infrastructures are being built, it is especially important to ensure that accessibility is a key design goal. Unfortunately, nearly all research on Information and Communication Technology (ICT) accessibility and innovation for persons with disabilities-whether from the legal, technical, or development fields-has focused on developed countries, with very little being written about developing world initiatives. Accessible Technology and the Developing World aims to change this, by bringing increased attention to ICT accessibility in developing areas. This book brings together a unique combination of contributors with diverse disciplinary backgrounds, including authors from well-known non-governmental organizations, significant United Nations entities, and universities in both the developing and developed world. Together, they present a unique and much needed review of this critical and growing area of work, and primarily address three core themes - the

lack of attention given to innovations taking place in the developing world, the need to ensure that infrastructures in the Global South do not present barriers to people with disabilities, and the need to exercise caution when applying techniques from the Global North to the Global South that won't transfer effectively. This book will be of use to researchers in the fields of civil rights, development studies, disability rights, disability studies, human-computer interaction and accessibility, human rights, international law, political science, and universal design.

This book's basic premise is that disabled people themselves know best what their needs are and that they should be involved in the planning and delivery of relief and development initiatives. The most effective support that agencies can offer is to empower them to claim their basic human rights and their civil and legal rights. The text is based on the experience of Oxfam staff working before, during and after the crisis in Kosovo; but its principles and practical training materials can be applied far more widely. Case studies from Africa and Asia arising from the work of Action and Disability and Development (ADD) show how the values of equality, empowerment and autonomy that are promoted by the social model of disability are universal in their relevance. It suggests practical materials particularly useful to

Poverty and Deprivation: Changing Contours traces the journey of poverty estimation and eradication in India since Independence. It brings together important contributions from eminent experts focussing on distinct characteristics of rural and urban poverty, multiple dimensions of poverty and deprivation, and policy interventions made by the Indian state to reduce them. It also highlights increasing inequality in assets and access to civic amenities and persistence of disparities across regions and social groups through empirically grounded analytical chapters. The chapters included in the book present assessments of crucial poverty alleviation programmes and suggestions for better performance in outcomes. The editor's introductions make analytical comments on the impact of economic growth on poverty reduction and the controversy surrounding it and register concern that the period of high growth did not improve human capital development. In this context, it also puts in perspective the need for compatibility of macro-economic fundamentals with social policy. The series 'Social Change in Contemporary India' brings

The World Report on Disability suggests more than a billion people totally experience disability. They generally have poorer health, lower education and fewer economic opportunities and higher rates of poverty than people without disabilities. This report provides the best available evidence about what works to overcome barriers to better care and services.

The strengths and abilities children develop from infancy through adolescence are crucial for their physical, emotional, and cognitive growth, which in turn help them to achieve success in school and to become responsible, economically self-sufficient, and healthy adults. Capable, responsible, and healthy adults are clearly the foundation of a well-functioning and prosperous society, yet America's future is not as secure as it could be because millions of American children live in

families with incomes below the poverty line. A wealth of evidence suggests that a lack of adequate economic resources for families with children compromises these children's ability to grow and achieve adult success, hurting them and the broader society. A Roadmap to Reducing Child Poverty reviews the research on linkages between child poverty and child well-being, and analyzes the poverty-reducing effects of major assistance programs directed at children and families. This report also provides policy and program recommendations for reducing the number of children living in poverty in the United States by half within 10 years.

Drawing from long term ethnographic work and practice in Guatemala, this incisive and interdisciplinary text brings in perspectives from critical disability studies, postcolonial theory and critical development to explore the various interactions and dynamics between disability and extreme poverty in rural areas.
