Batteries have become such a part of our everyday lives that we do not notice them anymore, yet they serve essential functions. Think about the battery that is keeping your phone function or the battery in your laptop that allows you to work at remote locations. Electric bikes, hoverboards, digital cameras and even some types of vehicles rely on lithium batteries to power their electronics in the modern-day world. The problem is, lithium battery packs can be quite expensive, usually going for at least over \$200 and they are obviously not tailor-made to fit your particular demands. Deciding to build your own DIY lithium battery pack is a great decision, and picking up this book tells me that you are interested in

doing this. In this guide, I cover everything you need to know about building custom, tailor-made lithium battery packs. You decide what you want; then you build it. By choosing the particular specifications of a battery pack yourself, you can ensure that the pack can be customized toward the requirements of the project you are working on. I start my guide by telling you more about the process of building a lithium battery pack, including what you can do with such a pack and where they can be used. I also cover the basics of the different lithium battery types that you will find on the market today and point out which ones are preferred over the others, as well as why they are the preferred options. In addition to explaining all the terminology and other aspects there are to know about
