Advanced Organic Chemistry" by Francis A. Carey and Richard J. Sundberg - the well-known textbook for graduate students - has now appeared in a 5th edition. The book is divided into two parts: "Part A" with the fundamentals of the structure of organic compounds and mechanisms, and "Part B" with specific reactions.

For ten editions, Organic Chemistry has been designed to meet the needs of the "mainstream," two-semester, undergraduate organic chemistry course. This best-selling text gives students a solid understanding of organic chemistry by stressing how fundamental reaction mechanisms function and reactions occur.

This text is aimed at a one-term course taken by allied health and agricultural science students. It includes annotated reaction summary tables, solved in-chapter examples, integrated applications (industrial, medical, etc.) and essays that describe organic chemistry's impact on the economy, environment, and the quality of life.

The two-part, fifth edition of Advanced Organic Chemistry has been substantially revised and reorganized for greater clarity. The material has been updated to reflect advances in the field since the previous edition, especially in computational chemistry. Part B describes the most general and useful synthetic reactions, organized on the basis of reaction type. It can stand-alone; together, with Part A: Structure and Mechanisms, the two volumes provide a comprehensive foundation for the study in organic chemistry. Companion websites provide digital models for students and exercise solutions for instructors.

Aimed at the single semester organic chemistry course, this text emphasizes understanding rather than memorization, focusing on the mechanisms by which organic reactions take place.

Written by Neil Allison, the Solutions Manual provides step-by-step solutions for all end of chapter problems which guide students through the reasoning behind each problem in the text.
