Mental Arithmetic And Aural S S Link Springer

Most people perform basic mental calculation using elementary arithmetic on a daily basis. An inability to calculate mentally is a serious obstacle to many common tasks. In U.S. schools, mental calculation is taught only for the most elementary arithmetic, such as single-digit addition and multiplication of two numbers between 0 and 12.

Math Trainer — Practice Mental Math

The Kindy Programme seeks to uncover and groom potential students in mental arithmetic from a very young age. The authors of this volume, which is newly available in paperback, all hold the view that mathematics is a form of intelligent problem solving which plays an important part in children's lives outside the classroom as well as in it. Learning and Teaching Mathematics provides an exciting account of recent and radically different research on teaching and learning mathematics which will have a far reaching effect on views about mathematical education.

More Trouble with Maths acknowledges that there are many reasons why children and adults are unable to function mathematically. Difficulties include problems with rote learning basic facts and procedures, debilitating anxiety, poor working and short-term memories and mathematics vocabulary. Central to this new edition is a range of standardised tests and diagnostic activities, including a 15 minute test of basic mathematics, a thinking style test, tests of basic fact retrieval and maths anxiety. Guiding the reader in the interpretation of tests, this new edition shows how identifying the barriers to learning is the first step in a programme of intervention. Written in an engaging and user-friendly style, Steve Chinn draws on his extensive experience and expertise to: show how to consider and appraise the many factors relating to mathematical learning difficulties explain how these factors can be investigated explore their impact on learning mathematics. Emphasising the need for a clinical approach when assessing individuals, this book shows how diagnosis and assessment can become integrated into everyday teaching. This highly practical and relevant resource is a crucial resource for anyone who wants to accurately and effectively identify the depth and nature of mathematical learning difficulties and dyscalculia.

The best way to heighten your kid's mental abilities and prepare your child for Gifted and Talented tests! With our notebooks "Mathematics + Mental Arithmetic with no struggle" your kids will easily master the techniques for quick mental counting, will repeat and remember the multiplication tables, will learn how to multiply in a column, and how to find the perimeter and area of a shape. Working with our notebooks, kids learn important skills such as: mental counting while solving math problems; photographic memory and spatial orientation; logical, critical, and analytical thinking; the ability to concentrate and focus attention; belief in their ability to solve a problem (leads to greater self-esteem and being more focused on the result); increased artistic potential and creative thinking; improvement of hearing and optical memory. A feature of our notebooks is the symbiosis of mental arithmetic and classical mathematics. This allows the use of both hemispheres of the brain simultaneously. This helps in developing memory, imagination, and visualization; and helps kids reach a high understanding of the material. In total, this exponentially increases the speed at which the learning process happens allowing kids to easily solve problems of different levels of difficulty. Mental arithmetic is a UNIQUE method of teaching children that trains the speed of perception and processing of information and allows them to simultaneously develop both hemispheres of the brain at the same time by mentally visualizing the calculations on the abacus. A developed brain is the basis for successful future activities. Our colorful notebook and the style of having exercises in the form of games lets children learn the material easily and hassle-free. Children will learn the rules of fast counting on the abacus, fast counting mentally, and rounding of all natural numbers. Also, the workbook contains a lot of funny pictures and interesting tasks that create positive motivation for learning and actively develop the logic, memory, attention, and intelligence of children. We wish you and your child succeed in learning mathematics and mental arithmetic!
