This book is the first to treat the chemistry of superheavy elements, including important related nuclear aspects, as a self contained topic. It is written for those – students and novices -- who begin to work and those who are working in this fascinating and challenging field of the heaviest and superheavy elements, for their lecturers, their advisers and for the practicing scientists in the field – chemists and physicists - as the most complete source of reference about our today's knowledge of the chemistry of transactinides and superheavy elements. However, besides a number of very detailed discussions for the experts this book shall also provide interesting and easy to read material for teachers who are interested in this subject, for those chemists and physicists who are not experts in the field and for our interested fellow scientists in adjacent fields. Special emphasis is laid on an extensive coverage of the original literature in the reference part of each of the eight chapters to facilitate further and deeper studies of specific aspects. The index for each chapter should provide help to easily find a desired topic and to use this book as a convenient source to get fast access to a desired topic. Superheavy elements – chemical elements which are much heavier than those which we know of from our daily life – are a persistent dream in human minds and the kernel of science fiction literature for about a century.

Historically, grief and spirituality have been jealously guarded as uniquely human experiences. Although non-human animal grief has been acknowledged in recent times, its potency has not been recognised as equal to human grief. Anthropocentric philosophical questions still underpin both academic and popular discussions. In *Enter the Animal*, Teya Brooks Pribac examines what we do and don't know about grief and spirituality. She explores the growing body of knowledge about attachment and loss and how they shape the lives of both human and non-human animals. A valuable addition to the vibrant interdisciplinary conversation about animal subjectivity, *Enter the Animal* identifies conceptual and methodological approaches that have contributed to the prejudice against nonhuman animals. It offers a compelling theoretical base for the consideration of grief and spirituality across species and highlights important ethical implications for how humans treat other animals.

Here are portraits of three very different Victorian women, all of whom married men of exceptional talent, energy and genius. To be the wife of such frenetic, explosive characters as David Livingstone, Karl Marx or Charles Darwin, especially at this period in history,

demanded rare qualities. Yet the late twentieth-century view of these women is perhaps best summed up in the frequently heard comment: 'I didn't know he had a wife.' The mid-nineteenth century was a time of unprecedented movement and upheaval. The revolutions of 1848 set Europe ablaze and sent swarms of political dissidents to seek freedom outside their homelands. Britain and her Empire were ruled by a young Queen Victoria, inspired by her enterprising, vigorous consort, Albert; it was a climate in which invention and discovery were encouraged. Men were creating new frontiers, both geographically and intellectually, and where they went their wives and families accompanied them.
