Perfect Substitutes: . In some cases of consumption, a two-good (X and Y) consumer may prefer to substitute one of the goods, say, X, for the other good Y at a constant rate, to keep his level of utility constant, i.e., $MRS_X, Y = \text{constant}$. For example, he may always want to substitute one red pencil for one blue pencil, to keep him-self on the same indifference curve (IC).

Solution: We can see from the diagram that the feasible set is bounded, so this problem will have an optimal solution for the maximum as well as for the minimum. The vertices (corner points) of the feasible set are (2, 2), (3, 7), and (5, 6). To find the optimal solutions at which the maximum and minimum occur, we substitute each
