Management in India is an amalgam of practices borrowed from the West—and more recently from Japan—overlaid with age-old Indian values and norms that are still extant. This book is a seminal attempt to understand the nature of Indian management and how it can be institutionalized. With an in-depth historical perspective and a thorough analysis of four types of Indian organizations—traditional family-owned private sector; public sector; governmental departments and multinationals—the author highlights certain common styles, policies and practices that are in consonance with the Indian environment and also provides guidelines for management practices for Indian organizations. The contradiction within the Indian context between stated policy and actual practice has been explored and brought to the fore. Also in this book: - evolution of management in India from ancient times to the present; - evolution of management practices in the West and Japan; their strengths and weaknesses as also their relevance in the Indian context; - overview of Indian management and the future direction it could take. Lucidly written and replete with detailed case studies based on data collected from over 50 organizations, the book provides the path Indian management needs to take in the context of the changing competitive environment.

A practical guide to industrial automation concepts, terminology, and applications Industrial Automation: Hands-On is a single source of essential information for those involved in the design and use of automated machinery. The book emphasizes control systems and offers full coverage of other relevant topics, including machine building, mechanical engineering and devices, manufacturing business systems, and job functions in an industrial environment. Detailed charts and tables serve as handy design aids. This is an invaluable reference for novices and seasoned automation professionals alike. COVERAGE INCLUDES: \* Automation and manufacturing \* Key concepts used in automation, controls, machinery design, and documentation \* Components and hardware \* Machine systems \* Process systems and automated machinery \* Software \* Occupations and trades \* Industrial and factory business systems, including Lean manufacturing \* Machine and system design \* Applications

Scholars working at the intersection of African-American history and the history of technology are redefining the idea of technology to include the work of the skilled artisan and the ingenuity of the self-taught inventor. Although denied access through most of American history to many new technologies and to the privileged education of the engineer, African-Americans have been engaged with a range of technologies, as makers and as users, since the colonial era. A Hammer in Their Hands (the title comes from the famous song about John Henry, "the steel-driving man" who beat the steam drill) collects newspaper and magazine articles, advertisements for runaway slaves, letters, folklore, excerpts from biography and fiction, legal patents, protest pamphlets, and other primary sources to document the technological achievements of African-Americans. Included in this rich and varied collection are a letter from Cotton Mather describing an early method of smallpox inoculation brought from Africa by a slave;

selections from Frederick Douglass's autobiography and Uncle Tom's Cabin; the Confederate Patent Act, which barred slaves from holding patents; articles from 1904 by Booker T. Washington and W. E. B. DuBois, debating the issue of industrial education for African-Americans; a 1924 article from Negro World, "Automobiles and Jim Crow Regulations"; a photograph of an all-black World War II combat squadron; and a 1998 presidential executive order on environmental justice. A Hammer in Their Hands and its companion volume of essays, Technology and the African-American Experience (MIT Press, 2004) will be essential references in an emerging area of study.

The names Bloch and Geitner are synonymous with machinery maintenance and reliability for process plants. They save companies like Dow and Equilon millions of dollars a year by extending the life of rotating machinery in their plants. Extending the life of existing machinery is the name of the game in the process industries, not designing new machinery. This series by Bloch and Geitner was the first and is still the best, most comprehensive source for doing just that. This classic text on reliability has been revised to include all new material on risk management, pre-grouted bases, laser alignment, cartridge seals maintenance, and many other topics which have undergone many developments since the last revision. Helps engineers save their companies hundreds of thousands of dollars a year by reducing machinery downtime Now in its third edition, with a twenty-year history of success Details the money-saving techniques used by many of the world's leading companies, including Exxon, DuPont, Dow, and dozens of others

Mechanical Engineering was the first school of engineering to be established at Purdue University in 1882. From just 120 students, the School has grown over the last 130 years to serve over 1,800 undergraduate and graduate students annually. Originally located in Mechanics Hall, a one-story red brick building, Mechanical Engineering now has extensive facilities that include two major satellite research laboratories, Ray W. Herrick Laboratories and Maurice J. Zucrow Laboratories, named in honor of the first director. There are more than 30 additional instructional and research laboratories, including the Roger B. Gatewood wing, which opened in 2011, and increased the space available to students and faculty by 44,000 square feet. Through stories and profiles, as well as hundreds of images (in black and white and color), Full Steam Ahead tells the story of the School of Mechanical Engineering and looks to a future where Purdue engineers are leading the world and making advances in biotechnology, nanotechnology, robotics, design and manufacturing, and renewable energy. Distinguished alumni included in this publication range from astronauts, like Gus Grissom and Jerry Ross, to Bob Peterson, lead writer and co-director for the Oscar-winning animated film, Up.
