Small engine repair is focused on, as the name suggests, the upkeep and restoration of combustion engines that power non-vehicular machines (aside from riding mowers, which count for both). These small-displacement engines aren't as big as those found in cars and trucks, but they can still run into complex issues from time to time.

Combustion and friction produce heat. Heat and friction -- if not controlled -- can quickly damage an engine's components. Small gas engines are typically cooled by air. Friction is reduced using movable bearings and lubricants. Air-Cooling Fins: For simplicity, most smaller gas engines are cooled by air. Metal fins around the outside of the combustion chamber help dissipate the internal heat.
