Autofocus / Manual Focus Performance and Metering. The Sony NEX-7 has the original contrast-detect autofocus system, which later was replaced by a "hybrid" AF system on the NEX-6. This unfortunately means that the AF speed is limited by the speed of contrast-detect, which cannot really compete with phase detection autofocus. In my experience, the NEX-6 got a pretty good boost in AF performance when compared to the NEX-7, contrary to what some other photographers have experienced.

The manual focus on the NEX-7 is awesome. Turn the focus ring in manual focus mode (or DMF, see below) and PRESTO the area of focus becomes magnified for more accuracy. This works in Live View and through the EVF. I quit using manual focus on the D3 because I couldn't trust my eyesight in low-light but now with the NEX-7 I'm back to using manual focus. When do I use manual focus?

The Sony NEX-6 is a very friendly camera for manual focus operation. If you choose to use third party lenses with an adapter, you will love the focus "peaking" feature (can be found in the camera "Setup" menu). I found focus peaking to be a very useful feature, because you do not have to guess anything when shooting in MF mode.
