I ordered and paid for a mower for nearly £3,000 via the website, only to have the order cancelled, the mower not delivered, but the money taken. I've been waiting well over a week now for a refund. Stiga seem to be very good at grabbing money and extremely poor at communication and administration, not to mention supplying mowers.

From the 15th century until the mid-1990s, media based on the printed word—books, magazines, handbills, newspapers, and journals—dominated society. Today, an onslaught of digital media centered on the Internet is developing at a breathtaking pace, destabilizing the very idea of printed media and fundamentally reshaping our world in the process. This study explores how Internet entities like Amazon, YouTube, Facebook, Wikipedia, and Google, and gadgets such as digital cameras, cell phones, video games, robots, drones, and all things MacIntosh have affected everything from the book industry and copyright law to how we conduct social relationships and consider knowledge. Including a chronology of significant events in the history of the digital explosion, this investigation of the often overlooked “shadow” side of new technology chronicles life during a radical societal shift and follows the process whereby one world disintegrates while another takes its place. This is the fourth edition of the classic text for students of urban and regional planning. It gives a historical overview of the

developments and changes in the theory and practice of planning, throughout the entire twentieth century. This extensively revised edition follows the successful format of previous editions. Specific reference is made to the most important British developments in recent times, including the devolution of Scotland, Wales and Northern Ireland, the establishment of the Mayor of London and the dominant urban sustainability paradigm. Planning in Western Europe, since 1945, now incorporates new material on EU-wide issues as well as updated country specific sections. Planning in the United States since 1945, now discusses the continuing trends of urban dispersal and social polarisation, as well as initiatives in land use planning and transportation policies. The book looks at the nature of the planning process at the end of the twentieth century and looks forward to the twenty-first century.

London is in a mess. This is evident from the increasingly unpleasant experience of daily life in the capital, from homelessness and unemployment to frustrating transport facilities and the general bad quality of the environment. However it is not only citizens of London who are suffering but the business community as well. London is having to face increasing competition from other European cities. There is growing appreciation and debate about these problems from companies, political parties, local government and community organisations. The Crisis of London provides a solid analysis of what has gone wrong and explores policy directions that could make the city a more humane and livable place. Beginning with a discussion of the basic elements of a home, a job and a means of travelling around, it becomes clear that even in these essential aspects London is failing. A feature of the crisis is an increasingly divided city with conditions for the poorer citizens worsening all the time. The authors consider the quality of the environment. They examine the greening of the city and the need for sustainability, the privatisation and dehumanisation of public spaces; the fear experienced by women, denying them full access to the capital; the position of ethnic minorities, and the perspectives of local communities. Using the case studies of Docklands and Kings Cross, the author's raise the crucial question of the government of the capital. This review of the city concludes with an analysis of a potential vision for London involving both the creation of the necessary institutional structures and also the will to address the needs of all the capital's citizens. The authors argue that a strategic approach is needed which accepts that the market alone cannot solve the problem. Stronger public intervention and government action is necessary if London is to match the developments in other European cities.

The cognitive scientists of today are increasingly occupied with investigating the ways in which human cognition depends on the

dynamic interaction over multiple time scales of brain, body and world. The old vision of the mind as a logic machine whose workings could be explained in abstraction from the biological body and the cultural environment is looking increasingly untenable and outdated. This collection explores the idea that this development in cognitive science can be productively interpreted through an encounter with Heidegger's existential phenomenology. Not only can Heidegger help us to understand the history of cognitive science but his philosophy also provides a conceptual framework for the cognitive science of today and of the future. Heidegger, however, is standardly interpreted as being resolutely anti-naturalist, as insisting that a scientific understanding of human beings is necessarily limited and partial in what it can tell us about human existence. Can there be a cognitive science of human existence or is such a project doomed to fail for reasons already articulated in Heidegger's philosophy?

The Mark of Cain makes available for the first time the accumulated psychoanalytic understanding of the psychopathic mind. Editor Reid Meloy, a leading authority on the psychology of the psychopath, has brought together in a single collection the most historically important psychoanalytic papers on the psychopath and delineated their continuing relevance to contemporary understanding. According to Meloy, two theoretical traditions flow into the psychoanalytic understanding of psychopathy. The first tributary focuses on the early development of the psychopath in order to illuminate how a profound alteration in self-regard leads both to a denigration of the other and to an impulsive search for gratification in the present. The second tributary seeks to locate the psychopathic miscarriage of human potentiality within analytic theories of personality structure and clinically grounded differential diagnosis. Meloy presents the major contributions associated with both of these traditions. Included within this body of literature are the original formulations of concepts that have long since become part of the psychoanalytic nomenclature: the "affectionless" juvenile offender, the diagnostic significance of "affect hunger," the behavioral consequences of "superego lacunae," the recourse to promiscuous identification in "the impostor," and the paradoxically lethal lure of "malignant narcissism." Of special interest are Meloy's historical notes to each chapter and two section introductions, the latter major essays in their own right. The explosion of empirical research on psychopathy over the past two decades masks the fact that much contemporary work in this area is grounded in the clinical formulations of leading psychoanalysts of the twentieth century. The Mark of Cain rescues this intimate understanding of the inner world of the psychopath and thereby contributes to clinical realism in the face of deception, manipulation, exploitation, and even frank dangerousness.

Jimmy was only nine years old when he was molested and sexually assaulted in London's dingy East End. He struggled to keep his dark secret, while coping with being adopted and his illiterate father's violent outbursts. Desperately needing to be loved, Jimmy accepts an offer of 'conditional kindness' from Tom, his scoutmaster. Now, after a lifetime of secrets, his story can be told as Tom is now dead, so....
