spiral curriculum has influenced a generation of educators and will continue to be a source of insight into the goals and methods of the educational process.

According to author Mike Schmoker, there is a yawning gap between the most well-known essential practices and the reality of most classrooms. This gap persists despite the hard, often heroic work done by many teachers and administrators. Schmoker believes that teachers and administrators may know what the best practices are, but they aren't using them or

reinforcing them consistently. He asserts that our schools are protected by a buffer--a protective barrier that prevents scrutiny of instruction by outsiders. The buffer exists within the school as well. Teachers often know only what is going on in their classrooms--and they may be completely in the dark about what other teachers in the school are doing. Even principals, says Schmoker, don't have a clear view of the daily practices of teaching and learning in their schools. Schmoker suggests that we need to get beyond this buffer to confront the truth about what is happening in classrooms, and to allow teachers to learn from each other and to be supervised properly. He outlines a plan that focuses on the importance of consistent

curriculum, authentic literacy education, and professional learning communities for teachers. What will students get out of this new approach? Learning for life. Schmoker argues passionately that students become learners for life when they have more opportunities to engage in strategic reading, writing with explicit guidance, and argument and discussion. Through strong teamwork, true leadership, and authentic learning, schools and their students can reach new heights. Results Now is a rally cry for educators to focus on what counts. If they do, Schmoker promises, the entire school community can count on unprecedented achievements.

This book discusses novel research on and practices in the field of physics teaching and learning. It gathers selected high-quality studies that were presented at the GIREP-ICPE-EPEC 2017 conference, which was jointly organised by the International Research Group on Physics Teaching (GIREP); European Physical Society – Physics Education Division, and the Physics Education Commission of the International Union of Pure and Applied Physics (IUPAP). The respective chapters address a wide variety of topics and approaches, pursued in various contexts and settings, all of which represent valuable contributions to the field of physics education research. Examples include the design of curricula and strategies to develop

reading skills. RTI worked with education experts to develop the EGRA in 2006, and it has been piloted and implemented in more than 40 countries. This volume aims to take stock of the substantial amount of information and experience generated through the use of EGRA, and to share this knowledge with practitioners, policymakers, and international donors. Chapters cover not only particular applications of the instrument but also put EGRA in the context of broader issues and developments in literacy and education.

This edited volume brings forth intriguing, novel and innovative research in the field of science education.

The chapters in the book deal with a wide variety of topics and research approaches, conducted in various contexts and settings, all adding a strong contribution to knowledge on science teaching and learning. The book is comprised of selected high-quality studies that were presented at the 11th European Science Education Research Association (ESERA) Conference, held in Helsinki, Finland from 31 August to 4 September, 2015. The ESERA science education research community consists of professionals with diverse disciplinary backgrounds from natural sciences to social sciences. This diversity provides a rich understanding of cognitive and affective aspects of science teaching and learning in this volume. The

studies in this book will invoke discussion and ignite further interest in finding new ways of doing and researching science education for the future and looking for international partners for both science education and science education research. The twenty-five chapters showcase current orientations of research in science education and are of interest to science teachers, teacher educators and science education researchers around the world with a commitment to evidence-based and forward-looking science teaching and learning.

The sequel to Pyramid Response to Intervention advocates that a successful RTI model begins by

asking the right questions to create a fundamentally effective learning environment for every student. RTI is not a series of implementation steps, but rather a way of thinking. Understand why bureaucratic, paperwork-heavy, compliance-oriented, test-score-driven approaches fail. Then learn how to create a focused RTI model that works.
