relationships with their clients and help them maximize their performance in work and in life. *Brief Coaching for Lasting Solutions* teaches coaches how to conduct conversations that are most useful to clients in achieving their goals within a brief period of time. The authors, two of the leading practitioners of the brief coaching method, masterfully guide readers through the steps of this process—from the initial meeting to follow-up sessions to troubleshooting setbacks—while illustrating essential skills with ample case examples. This book is written for coaches who want to reduce the time it takes to provide effective coaching while making the best use possible of resources the client brings to the table. At the same time it is written for the benefit of today's clients, so many of whom want to avoid coaching that is time-intensive and costly, and instead seek coaching that is organized, efficient, and

This book contains a selection of more than 500 mathematical problems and their solutions from the PhD qualifying examination papers of more than ten famous American universities. The problems cover six aspects of graduate school mathematics: Algebra, Topology, Differential Geometry, Real Analysis, Complex Analysis and Partial Differential Equations. The depth of knowledge involved is not beyond the contents of the textbooks for graduate students, while solution of the problems requires deep understanding of the mathematical principles and skilled techniques. For students this book is a valuable complement to

Physics with Trapped Charged Particles. This textbook collates the lectures delivered there, covering the fundamental physics of particle traps and the different types of applications of these devices. Taken as a whole, the book gives an overview of why traps for charged particles are important, how they work, their special features and limitations, and their application in areas such as precision measurements, mass spectrometry, optical clocks, plasma physics, antihydrogen creation, quantum simulation and quantum information processing. Chapters from various world experts include those on the basic properties of Penning traps and RF traps, as well as those covering important practical aspects such as vacuum systems, detection techniques, and different types of particle cooling, including laser cooling. Each individual chapter provides information and guidance on the application of the above
