The Tyranny of Experts: Economists, Dictators, and the ...

The Tyranny of Experts by William Easterly highlights the failure of "experts" to improve economic development such that poverty is reduced and prosperity takes hold. It is a nice complement to the book Why Nation's Fail by Acemoglu and Robinson that discusses the importance of economic and political institutions for economic development, especially inclusive versus extractive institutions.

The Tyranny of Experts: Economists, Dictators, and the ...

The Tyranny of Experts: Economists, Dictators, and the Forgotten Rights of the Poor is a 2014 book by the development economist William Easterly arguing that there are no silver bullets for promoting economic development and that the best hope is to support economic, political, and personal freedom worldwide. The book is similar to Easterly's earlier books on economic development, The Elusive Quest for Growth and The White Man's Burden.

An economist describes how tactics to fight global poverty have actually resulted in suppressing the rights of the poor and argues for a new model of development in third world countries that will address unchecked state power and retain individual freedoms. 40,000 first printing.

A "bracingly iconoclastic" (New York Times) critique of global development that points a way toward respect for the poor and an end to global poverty Over the last century, global poverty has largely been viewed as a technical problem that requires the right "expert" solution. Yet all too often, experts fix immediate problems without addressing the systematic oppression that created them. In The Tyranny of Experts, renowned economist William Easterly argues that the expert-approved, authoritarian approach to development has not only made little lasting progress, but has proven a convenient rationale for generations of human rights violations. Although aid agencies, such as the World Bank and the Gates Foundation, are still regarded as both well-meaning and effective, they're founded on the mistaken belief that wise technocrats from the West will be the saviors of helpless victims from the rest. This revised edition comes at a time of even greater peril for freedom worldwide. Easterly brings in new research that carries his masterful critiques into the present. He reveals the fundamental errors inherent in the long-celebrated top-down approach and offers a new model for developing countries – a model predicated on respect for the rights of poor people – with the power to end global poverty.

In this "bracingly iconoclastic " book (New York Times Book Review), a renowned economics scholar breaks down the fight to end global poverty and the rights that poor individuals have had taken away for generations. In The Tyranny of Experts, renowned economist William Easterly examines our failing efforts to fight global poverty, and argues that the "expert approved" top-down approach to development has not only made little lasting progress, but has proven a convenient rationale for decades of human rights violations perpetrated by colonialists, postcolonial dictators, and US and UK foreign policymakers seeking autocratic allies. Demonstrating how our traditional antipoverty tactics have both trampled the freedom of the world's poor and suppressed a vital debate about alternative approaches to solving poverty, Easterly presents a devastating critique of the blighted record of authoritarian development. In this masterful work, Easterly reveals the fundamental errors inherent in our traditional approach and offers new principles for Western agencies and developing countries alike: principles that, because they are predicated on respect for the rights of poor people, have the power to end global poverty once and for all.

What Works in Development? brings together leading experts to address one of the most basic yet vexing issues in development: what do we really know about what works—and what doesn't—in fighting global poverty? The contributors, including many of the world's most respected economic development analysts, focus on the ongoing debate over which paths to development truly maximize results. Should we emphasize a big-picture approach—focusing on the role of institutions, macroeconomic policies, growth strategies, and other country-level factors? Or is a more grassroots approach the way to go, with the focus on particular microeconomic interventions such as conditional cash transfers, bed nets, and other microlevel improvements in service delivery on the ground? The book attempts to find a consensus on which approach is likely to be more effective. Contributors include Nana Ashraf (Harvard Business School), Abhijit Banerjee (MIT), Nancy Birdsall (Center for Global Development), Anne Case (Princeton University), Jessica Cohen (Brookings),William Easterly (NYU and Brookings),Alaka Halla (Innovations for Poverty Action), Ricardo Hausman (Harvard University), Simon Johnson (MIT), Peter Klenow (Stanford University), Michael Kremer (Harvard), Ross Levine (Brown University), Sendhil Mullainathan (Harvard), Ben Olken (MIT), Lant Pritchett (Harvard), Martin Ravallion (World Bank), Dani Rodrik (Harvard), Paul Romer (Stanford University), and DavidWeil (Brown).

By the winner of the 1988 Nobel Prize in Economics, an essential and paradigm-altering framework for understanding economic development—for both rich and poor—in the twenty-first century. Freedom, Sen argues, is both the end and most efficient means of sustaining economic life and the key to securing the general welfare of the world's entire population. Releasing the idea of individual freedom from association with any particular historical, intellectual, political, or religious tradition, Sen clearly demonstrates its current applicability and possibilities. In the new global economy, where, despite unprecedented increases in overall opulence, the contemporary world denies elementary freedoms to vast numbers—perhaps even the majority of people—he concludes, it is still possible to practically and optimistically retain a sense of social accountability. Development as Freedom is essential reading.

Why economists' attempts to help poorer countries improve their economic well-being have failed. Since the end of World War II, economists have tried to figure out how poor countries in the tropics could attain standards of living approaching those of countries in Europe and North America. Attempted remedies have included providing foreign aid, investing in machines, fostering education, controlling population growth, and making aid loans as well as forgiving those loans on condition of reforms. None of these solutions has delivered as promised. The problem is not the failure of economics, William Easterly argues, but the failure to apply economic principles to practical policy work. In this book Easterly shows how these solutions all violate the basic principle of economics, that people—private individuals and businesses, government officials, even aid donors—respond to incentives. Easterly first discusses the importance of growth. He then analyzes the development solutions that have failed. Finally, he suggests alternative approaches to the problem. Written in an accessible, at times irreverent, style, Easterly's book combines modern growth theory with anecdotes from his fieldwork for the World Bank.

The first and definitive book of its kind, Joan Spero's The Politics of International Economic Relations has been fully updated to reflect the sweeping changes in the international arena. With the expertise of co-author Jeffrey Hart, the fifth edition strengthens the coverage of political and economic relations since the end of the Cold War, economic polarization in developing nations and the roots of economic decline in centrally planned economies. A new chapter on industrial policy and competitiveness debates further illustrates the changing dynamics of International Political Economy. Ideal as a supplement to the International Relations course or as the core text in International Political Economy, Spero and Hart's The Politics of International Economic Relations continues to give students the breadth and depth of scholarship needed to understand the politics of world economy.

For the first time in history, the world shut itself down—by choice—all for fear of a virus, COVID-19, that wasn ' t well understood. The government, with the support of most Americans, ordered the closure of tens of thousands of small businesses—many never to return. Almost every school and college in the country sent its students home to finish the school year in front of a computer. Churches cancelled worship services. " Social distancing " went from a non-word to a moral obligation overnight. Moral preening on social media achieved ever new heights. The world will reopen and life will go on, but what kind of world will it be when it does? It can ' t be what it was, because of what ' s just happened. Professors Jay Richards, William Briggs, and Douglas Axe take a deep dive into the crucial questions on the minds of millions of Americans during one of the most jarring and unprecedented global events in a generation. What will be the total cost in dollars, lives, and livelihoods of this response from governments, on advice from Science? What role have national and global health organizations such as WHO played in this? To whom are they accountable? What evidence do they rely on in sounding the alarm? How did science bureaucrats, relying on murky data and speculative computer models, gain the power to shut down the global economy? How did politicians, who know nothing of the science, decide whom to trust? We need to know what and how it happened, to keep it from ever happening again.

NAMED ONE OF THE BEST BOOKS OF THE YEAR BY Bloomberg • Forbes • The Spectator Recipient of Foreign Policy's 2013 Albie Award A powerful portrayal of Jeffrey Sachs's ambitious quest to end global poverty "The poor you will always have with you," to cite the Gospel of Matthew 26:11. Jeffrey Sachs—celebrated economist, special advisor to the Secretary General of the United Nations, and author of the influential bestseller The End of Poverty—disagrees. In his view, poverty is a problem that can be solved. With single-minded determination he has attempted to put into practice his theories about ending extreme poverty, to prove that the world's most destitute people can be lifted onto "the ladder of development." In 2006, Sachs launched the Millennium Villages Project, a daring five-year experiment designed to test his theories in Africa. The first Millennium village was in Sauri, a remote cluster of farming communities in western Kenya. The initial results were encouraging. With his first taste of success, and backed by one hundred twenty million dollars from George Soros and other likeminded donors, Sachs rolled out a dozen model villages in ten sub-Saharan countries. Once his approach was validated it would be scaled up across the entire continent. At least that was the idea. For the past six years, Nina Munk has reported deeply on the Millennium Villages Project, accompanying Sachs on his official trips to Africa and listening in on conversations with heads-of-state, humanitarian organizations, rival economists, and development experts. She has immersed herself in the lives of people in two Millennium villages: Ruhira, in southwest Uganda, and Dertu, in the arid borderland between Kenya and Somalia. Accepting the hospitality of camel herders and small-hold farmers, and witnessing their struggle to survive, Munk came to understand the real-life issues that challenge Sachs's formula for ending global poverty. THE IDEALIST is the profound and moving story of what happens when the abstract theories of a brilliant, driven man meet the reality of human life.
