Conic sections are generated by the intersection of a plane with a cone (Figure 11.5.2). If the plane is parallel to the axis of revolution (the y-axis), then the conic section is a hyperbola. If the plane is parallel to the generating line, the conic section is a parabola.

### Conic Sections Class 11 Chapter 11 Notes and Examples

Yesterday my students had a homework assignment from their textbook where they had to graph a couple conic sections that had been rotated. One of them was particularly tedious  $(3x^2 - 2\sqrt{3}xy + y^2 + 2x + 2\sqrt{3}y) = 0$ , so there are usually lots of questions about it. I will have a student who got the correct answer present their work on the document camera.
