Urinary System Study Guide Answer

Anatomy of the Urinary System The urinary system consists of two kidneys, two ureters, a urinary bladder , and a urethra. The kidneys alone perform the functions just described and manufacture urine in the process, while the other organs of the urinary system provide temporary storage reservoirs for urine or serve as transportation channels to carry it from one body region to another.

Urinary System Anatomy and Physiology: Study Guide for Nurses

Study Guide- Urinary System. the functional unit of the kidney filtration system (includes glomerulus, bowman's capsule, and tubules) removing toxins from the blood by instilling dialysis fluid into the abdominal cavity (the toxins are drawn from the blood into the fluid then the fluid is removed) lab or dipstick test to check the makeup of the urine and what is in the urine (i.e. blood, WBC, protein, sugar, etc.)
